ExploSim Audio Visual Indicator (EAVI) **An ExploSim accessory**

EAVI (the ExploSim Audio Visual Indicator) addresses the need for an audio/visual indicator to inform all participants that the ExploSim transmitter has been triggered.

When the ExploSim transmitter activates, EAVI flashes red and emits a 6 second siren at 80 db. (EAVI can be set to silent mode if the siren is not wanted i.e. if in a public area).

EAVI adds the capability to involve many participants in bomb-related safety and security exercises and assessments.
